

# Surgical Instruments Tracking

Pivot Smartflow is a cloud-based Workflow System to simplify control of surgical instruments

## Benefits of Pivot Smartflow

**PATIENT  
SAFETY**

**TOTAL  
TRANSPARENCY**

**INFECTION  
CONTROL**

Using Pivot Smartflow makes a big difference, not just to the Sterile Processing team but also to caregivers and management.

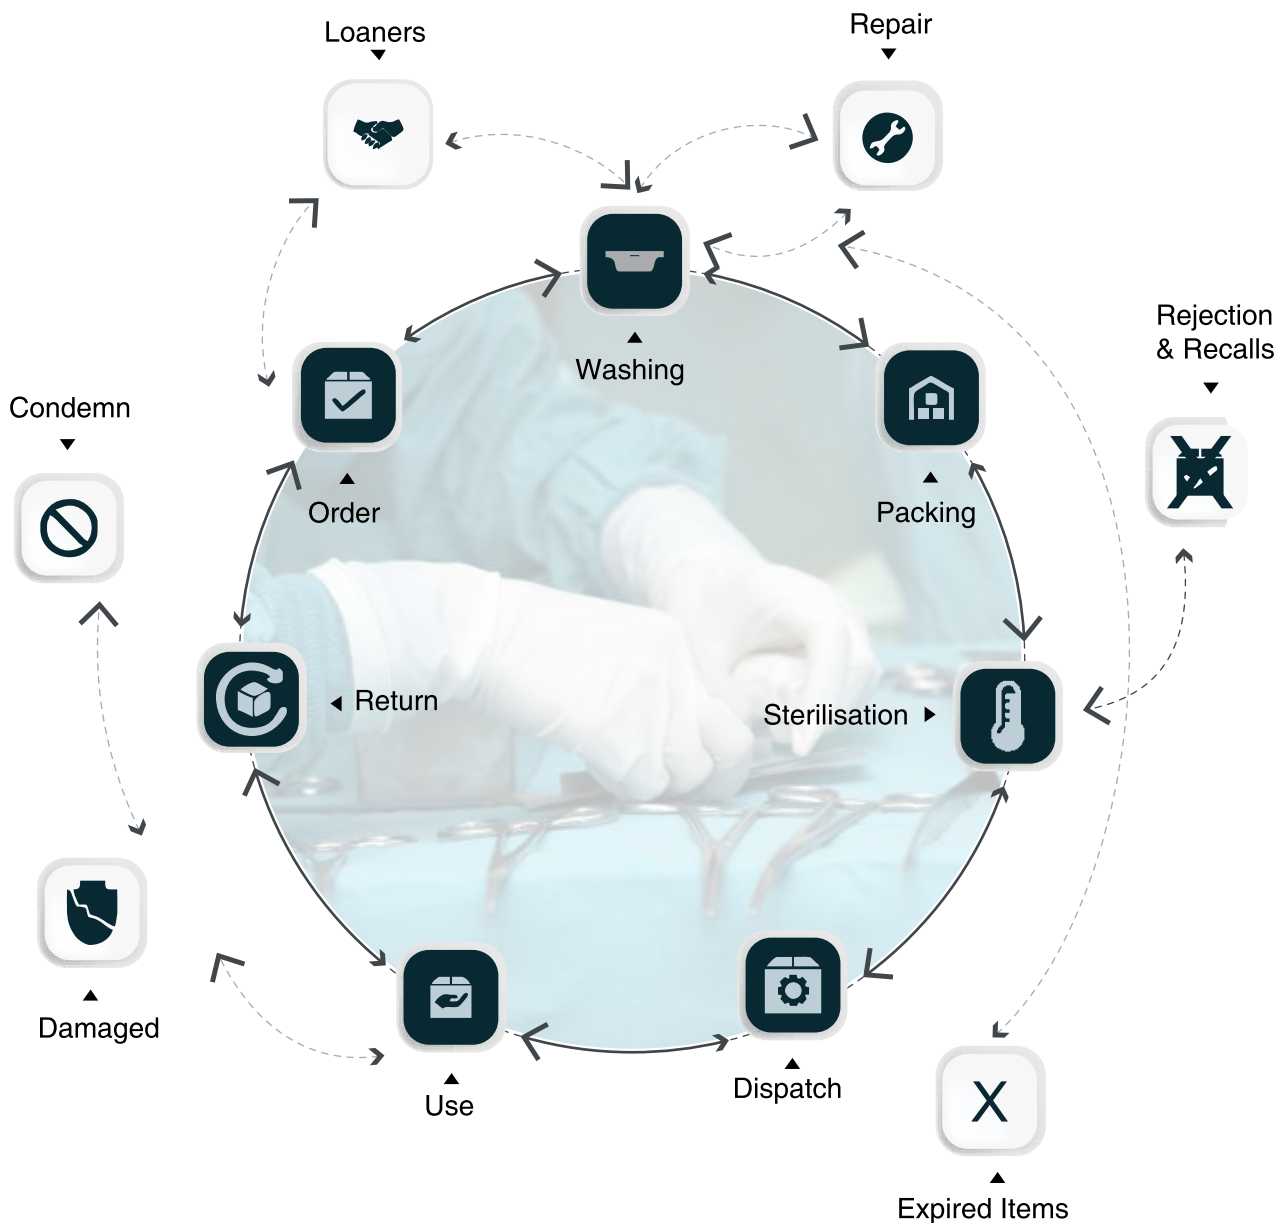

Sterile Technicians can ensure that the right instruments are packed in the right sets and there are no shortfalls or mismatches. This not just saves time for the caregiving team when performing critical procedures but also greatly reduces stresses and disagreements between departments. What's more, Pivot Smartflow frees from mundane and repetitive manual work so that they can focus on quality.

Surgeons can be assured of receiving accurately assembled surgical sets in time for each procedure, nursing staff has access to detailed list of contents of sterile sets even without opening them and they can plan surgeries without having to physically verify inventory of sterile sets.

Managements can get access to data driven insights for making more effective purchase decisions. In fact, Pivot Smartflow gives managements unprecedented insights into surgical inventories and brings greater accountability and control.

## The Workflow

Whether you are a hospital, large or small, the system offers you a cost effective way of improving the life of your instruments, taking better decisions on workflow, replacements, condemnations, and creates a stress free way for various teams to communicate and collaborate in the process.

Through our simple checklist-based UI, Pivot Smartflow helps build a disciplined workflow. Process documentation is created in the background and repetitive manual effort is avoided. Labels, packing lists, sterilisation batch reports etc. can all be generated digitally and then archived for further reference.

Pivot Smartflow takes care of not just instruments, but other sterile inventory including consumables, implants, linen etc.

## Pivot Smartflow Building-Blocks

A step-by-step approach towards becoming a 'smarter' hospital

**Pivot Onboard**  
Inventory On-boarding Service

**Surgical Whiteboard**  
The ultimate patient-care tool

**Pivotmark**  
Unique ID marking solutions

**Sterilisation Management**  
The key to infection control

**Workflow Digitisation**  
Enterprise-wide footprint,  
end-to-end tracking

**Repairs Management**  
Optimise the repair and reuse-ability  
of your instruments

**Pivot Set-Store**  
Online Real Time access  
to surgical instrument inventory at a glance

**Incident Reporting**  
Transparent and fool-proof reporting  
of incidents

## About Pivot Smartflow

Surgical instruments play a vital role in delivering patient care. For a hospital, monitoring, sterilising, maintaining them and ensuring their timely availability, can be challenging and time consuming.

The Pivot Smartflow Software streamlines surgical instrument processes, eliminating the uncertainties of misplaced instruments, adding value to patient safety and effective time and resource management.

It digitally connects the Central Sterile Services Department (CSSD) to caregiving units such as ICUs, Operating Rooms (OR); enabling full traceability, automatic identification, cycle tracking and documentation for all sterile supplies.

Pivot Smartflow works on a pay-as-you-go model and uses Barcodes and/or RFID to enable auto-identification, speed up counts and simplify tracking. In effect, it gives you the freedom to put your best foot forward and reach your daily goals in patient care.
